(50) Weather at the time of accident: Visibility of three (3) miles; scattered low clouds at two thousand (2000) feet; surface wind three hundred ten (310) degrees at four (4) to seven (7) MPH.

(51) Was the pilot flying on instruments at the time of accident? No
 (52) Cleared from A-73 (53) To A-73 (54) Kind of clearance Local

(55) Pilot's mission: Local formation training.

(56) Nature of accident: Landing accident. Plane left runway upon landing.

(57) Cause of accident: Plane landed with deflated tire.

(58) Has Form 54 been submitted? No.

DESCRIPTION OF ACCIDENT

(Brief narrative of accident. Include statement of responsibility and recommendations for action to prevent repetition)

1. On 27 January 1945, 1st Lt Richard B. Spangler was flying a B-26B50 aircraft, A.F. #42-95931, on a local training mission for the purpose of formation practice. Aircraft was loaded with 2 X 2000lb. G.P. bombs.

Upon completing his mission, Lt Spangler returned to base and made a normal landing on runway one-zero-zero (100), touching down in the first quarter of the runway and slightly right of center. Approximately two-hundred (200) yards beyond the touchdown point, the plane ran off the right side of the runway, going through a deep bank of snow at the runway edge. Impact with this snow bank tore off the right main gear and the nose gear. The plane continued sliding for about fifty (50) yards, collapsing the left main gear and turning through almost 180°. Aircraft is total loss as result of this accident.

Examination of tire tracks indicates that accident was due to deflated right main wheel tire. Track made by right tire was almost twice as wide as that made by normally inflated tire. Tire was found to be deflated immediately after accident, with no apparent break in casing. Subsequent inspection revealed valve stem to be sheared in two within the casing.

2. Cause: 100% materiel failure. Plane landed with deflated right main wheel tire, causing aircraft to leave runway.

3. Recommendations: None.

PILOT'S STATEMENT OF ACCIDENT

1. I was flying aircraft AAF No 42-95931, a B-26B50. I had 120 M.P.H. when the aircraft touched the ground in the middle of the runway. With the nose wheel in the air, the aircraft started sliding sideways to the right. I think that this was caused by ice on the runway. I hit full power on the right engine and full left brake. This was inadequate and my right main gear hit the snow piled along the runway, snapping it off. The aircraft spun around to the right, going off the runway doing a 180° turn, coming to a rest off the runway about half of the distance down the field. The crew went out the escape hatches, none being seriously hurt.

Richard B Spangler

1st Lt, Air Corps
Pilot

CO-PILOT'S STATEMENT OF ACCIDENT

1. The aircraft was in landing approach. The main wheels hit the ground at approximately 120 M.P.H. with nose gear in the air. The plane skidded to the right caused by, in my opinion, ice. The left brake along with right throttle was applied, but to no avail. The plane hit the snow pile on the right side of the runway breaking off the right main gear. This in turn broke off the nose gear and sent the plane into a spin of approximately 180° about half way down the runway and off to the right.
